Traffic Volumes

Traffic Volumes

The census count of vehicles on city streets is normally reported in the form of Average Daily Traffic (ADT) counts. These counts provide a good estimate for the actual number of vehicles on an average weekday at select street segments. Specific block segments are selected for a count because they are deemed as representative of a larger segment on the same roadway. ADT counts are used by transportation engineers, economists, real estate agents, planners, and others professionals for planning and operational analysis. The frequency for each count varies depending on City staff's needs for analysis in any given area. This report covers the counts taken in our City during the past 12 years approximately.

	Field	Description
1	street_name	The vehicles were counted on this street
2	limits	The vehicles were counted between these cross streets
3	northbound_count	The 24 hour count of northbound vehicles
4	southbound_count	The 24 hour count of southbound vehicles
5	eastbound_count	The 24 hour count of eastbound vehicles
6	westbound_count	The 24 hour count of westbound vehicles
7	total_count	The 24 hour total of all directions of vehicles combined
8	count_date	The vehicles were counted on this date
